TITLE: CONSTRUCTION CHAIR FOR USE WITH TILT WALL CONSTRUCTION

Amendment B: CLAIM AMENDMENTS

Claims 1 - 20 (canceled). These claims were canceled by an earlier amendment.

Claims 21 - 37 (canceled). These claims are canceled by the present amendment.

38. (new) A chair comprising:

a receiving area;

a plurality of legs extending downwardly from said receiving area, each of said plurality of legs comprising:

a first portion extending at an angle outwardly from said receiving area; and

a second portion extending from an end of said first position opposite said receiving area, said second portion extending only vertically downwardly or inwardly from said end of said first portion, said second portion having a flat bottom surface opposite said end of said first portion, said first portion having an inner side and an outer side, said inner side extending at a greater angle with respect to vertical than an angle that said outer side extends with respect to vertical such that said inner side and said outer side converge toward said end of said first portion, said second portion having an inner side and an outer side tapering so as to converge at said flat bottom surface; and

a pin member extending vertically downwardly from said flat bottom surface.

39. (new) The chair of Claim 38, said first portion having a length greater than a length of said second portion.

40. (new) The chair of Claim 38, said pin member being a single pin member of inverted conical shape.

41. (new) The chair of Claim 38, said pin member having a point formed at an end thereof opposite said flat bottom surface.

42. (new) The chair of Claim 38, each of said plurality of legs being separated from and unconnected to an adjacent leg other than at said receiving area.

43. (new) The chair of Claim 38, said receiving area having a horizontal section and a generally parabolic section extending transverse to said horizontal section.

44. (new) The chair of Claim 43, a first of said plurality of legs extending downwardly from one end of said horizontal section, a second of said plurality of legs extending downwardly from an opposite end of said horizontal section, and third of said plurality of legs extending downwardly from one end of said generally parabolic section, a fourth of said plurality of legs extending downwardly from an opposite side of said generally parabolic section.

45. (new) The chair of Claim 38, said receiving area and said plurality of legs being integrally formed together of a nylon material.

46. (new) A chair comprising:

a receiving area; and

a plurality of separate legs extending downwardly from said receiving area, each of said plurality of legs comprising:

a first portion extending at an angle outwardly from said receiving area;

a second portion extending from an end of said first opposite said receiving area, said first portion having a length greater than a length of said second portion, said second portion extending at an angle that is different than said angle that said first portion extends from said receiving area, said second portion having a flat bottom surface opposite said end of said first portion, said second portion extending only vertically downwardly or inwardly from said end of said first portion, said first portion having an inner side and outer side, said inner side extending at a greater angle with respect to vertical than an angle that said outer side extends with respect to vertical such that said inner side and said outer side converge toward said end of said first portion, said second portion having an inner side and an outer side, said inner and outer sides of said second portion converging toward said flat bottom surface; and

a pin member extending vertically downwardly from said flat bottom surface.

47. (new) The chair of Claim 46, each of said plurality of legs being separated from and unconnected to an adjacent leg other than at said receiving area.

48. (new) A chair comprising:

a receiving area; and

a plurality of legs extending downwardly from said receiving area, each of said plurality of legs comprising:

a first portion extending at an angle outwardly from said receiving area;

a second portion extending at an end of said first portion opposite said receiving area, said second portion having a flat bottom surface opposite said end of said first portion, said second portion extending only vertically downwardly or inwardly from said end of said first portion, said first portion having a length greater than a length of said second portion.; and

a single pin member extending vertically downwardly from said flat bottom surface, said pin member being of an inverted conical shape and having a point formed at an end thereof opposite said flat bottom surface.

49. (new) The chair of Claim 48, each of said plurality of legs being separated from and unconnected to an adjacent leg other than at said receiving area.
